

LOTION STEM

FORMULE
AGGIORNATE

LOTION STEM BOOSTER. Product with a formula updated to the latest findings in cosmetic science to energize the hair root based on exosomes, prebiotics, plant stem cells, serenoa repens, arginine, vitis vinifera and peptides; shock treatment that allows a surprising result with about 30% of new hair in the anagen phase. Format 60ml.

The real innovation of recent years in the treatment of baldness and in the protection of hair is contained in the so-called **"Biomimetic Peptides" together with prebiotics and exosomes (anti-aging).**

The results provide convincing evidence, and suggest a cosmetic use of this natural tetrapeptide-3 to prevent skin aging and hair loss and to promote skin regeneration and hair growth.

Acetyl Tetrapeptide-3, tetrapeptide has recently been shown to contribute to the repair of skin lesions, significantly stimulates the growth of human keratinocytes, follicle dermal papilla cells. In addition, it enhances the growth of human epidermal keratinocyte progenitor and stem cells as shown in a vitreous test. It increases the thickness of the epidermis and increases the synthesis of keratin, collagen, as well as glycoaminoglycans (GAG). In hair follicles it promotes hair lengthening.

It is important to use it daily for a period of 30-40 days and then continue with another specific lotion. It is also used in the oxygen therapy airbrush or in the skin in ozone therapy.

INGREDIENTS: Aqua-water, butylene glycol, inulin, dextran, acetyltetrapeptide-3, trifolium pratense (clover) flower extract, polysorbate-20, paeonia lactiflora (peony) root vesicles, gardenia jasminoides meristem cell culture, arginine chlorhydrate, serenoa repens (saw palmetto) leaf extract, vitis vinifera (grape) fruit extract, propylene glycol, benzyl alcohol, benzoic acid.
